

SOFT MONITOUCH

TELLUS and V-Server

Safety Considerations

- For safe operation, read the instruction manual or user manual that comes with the product carefully or consult the distributor from which you purchased the product, before using the product.
- Products introduced in this catalog have not been designed or manufactured for such applications in a system or equipment that will affect human bodies or lives.
- Customers, who want to use the products introduced in this catalog for special systems or devices such as for atomic-energy control, aerospace use, medical use, passenger vehicle, and traffic control, are requested to consult the Hakko Overseas Sales Section.
- Customers are requested to prepare safety measures when they apply the products introduced in this catalog to such systems or facilities that will affect human lives or cause severe damage to property if the products become faulty.
- For safe operation, wiring should be conducted only by qualified engineers who have sufficient technical knowledge about electrical work or wiring.

Notes to consider before purchasing

- Appearance and specifications are subject to modification without prior notice due to technical improvements.
- Colors in the catalog may differ from the actual colors due to printing inaccuracies.
- Consult your distributor or us for further information about products in this catalog.

Bringing the factory floor to your desk

TELLUS and V-Server

TELLUS and V-Server links Monitouch in a factory with a PC in the office, so that your PC can collect on-site data or monitor and control the equipment in the factory.

This combination enables efficient and low-cost production; immediate and appropriate responses to the condition of the line is possible from anywhere.

V-Server

P.4

Collection and saving of current data

Linkage of a PC and Monitouch via Ethernet enables collection and saving of on-site data in real time.

TELLUS-Remote

P.6

Remote monitoring and control

Installation of the TELLUS and V-Server software package allows your PC to monitor and control the production site via Monitouch through Ethernet.

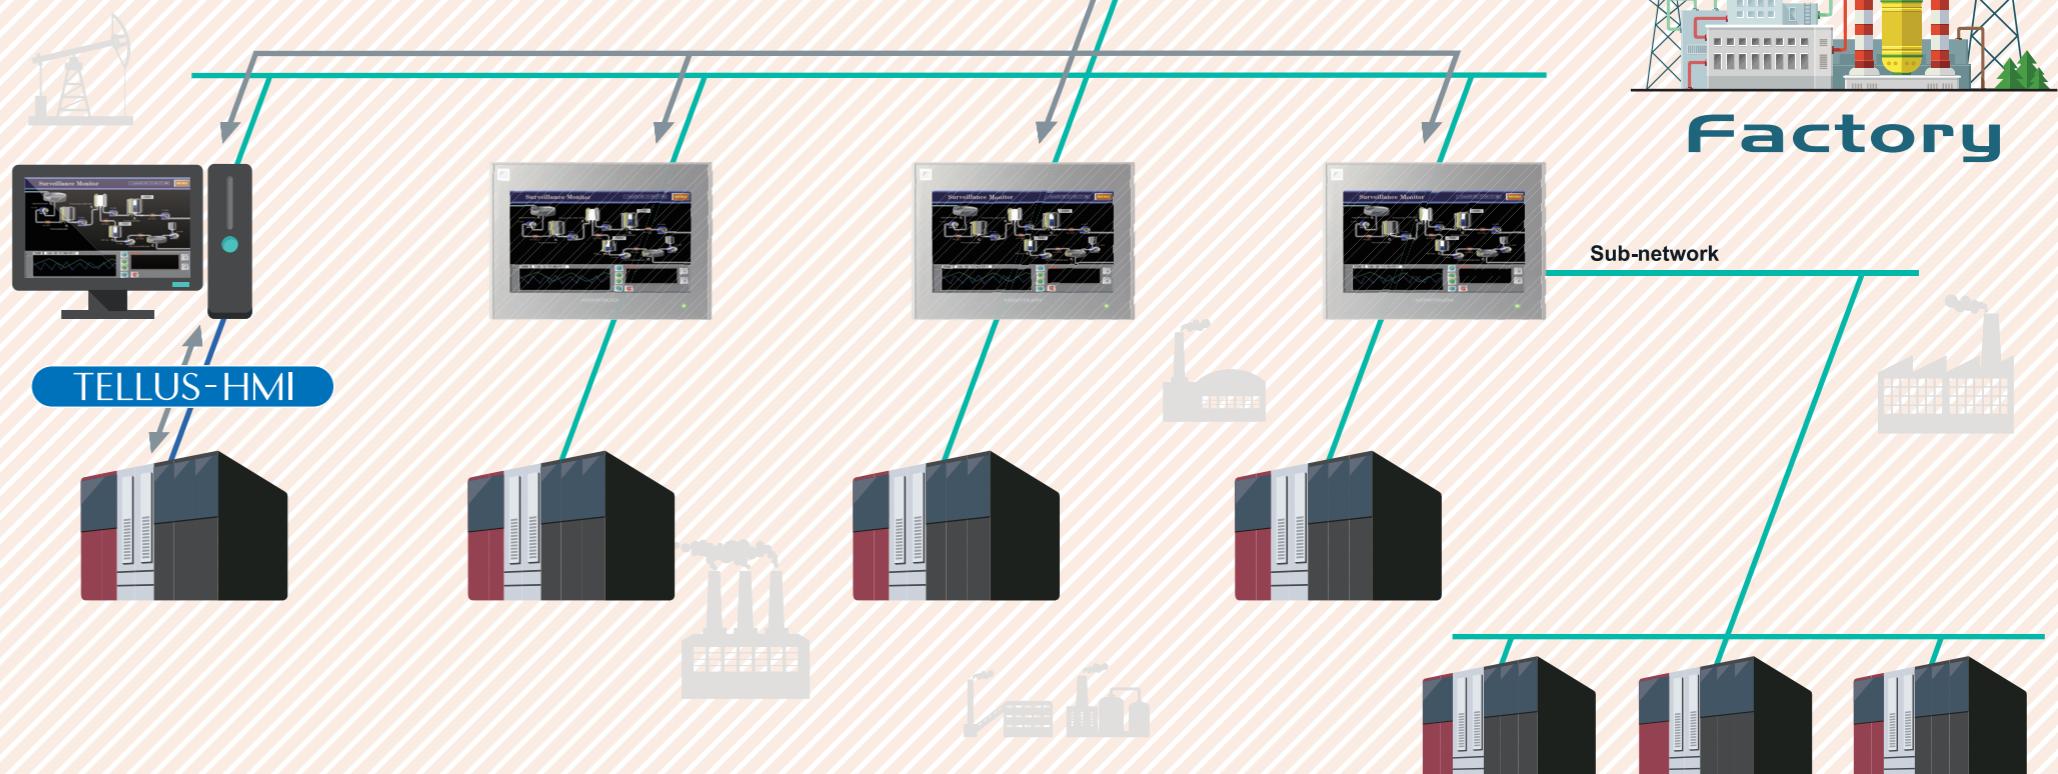

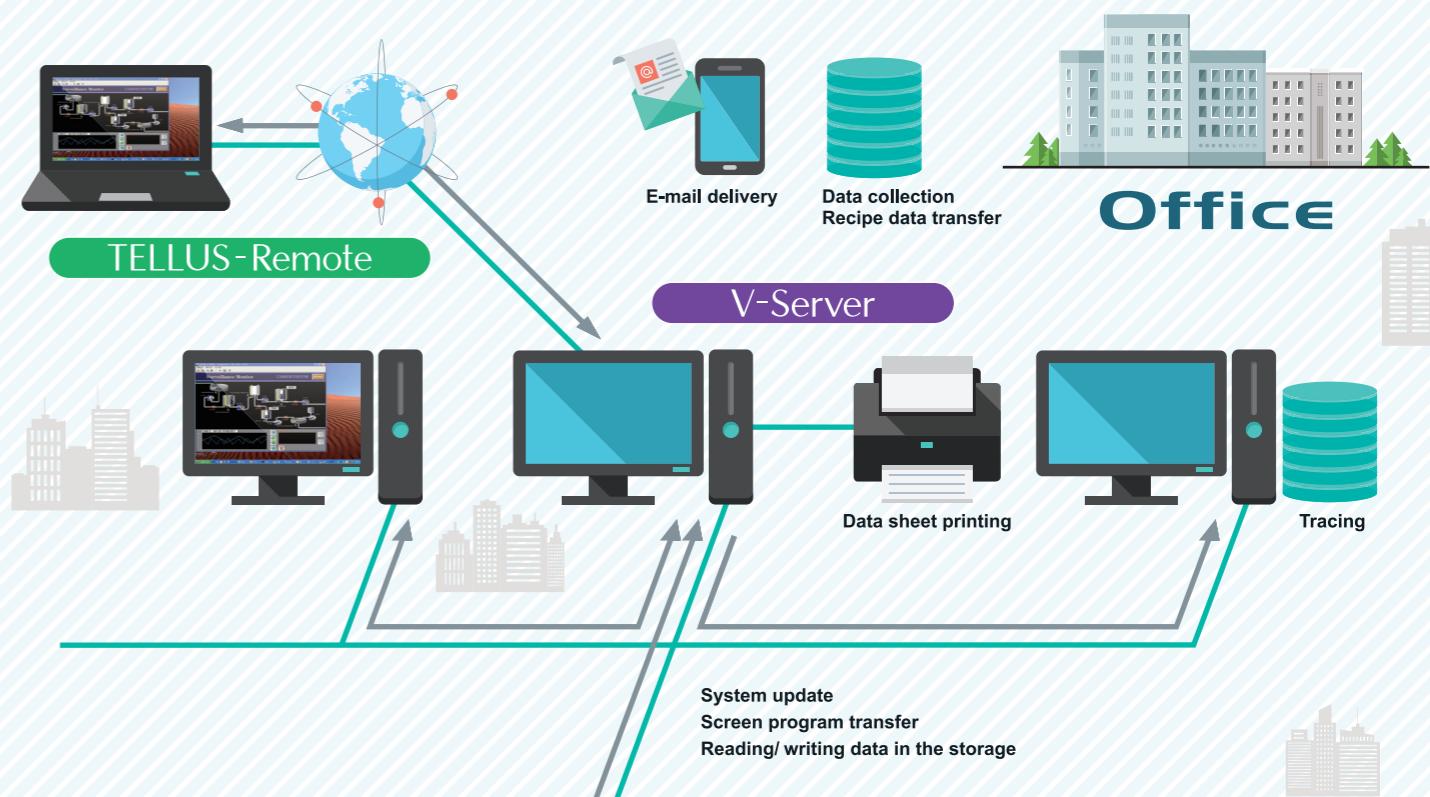

TELLUS-HMI

P.7

Monitouch functions available on your PC

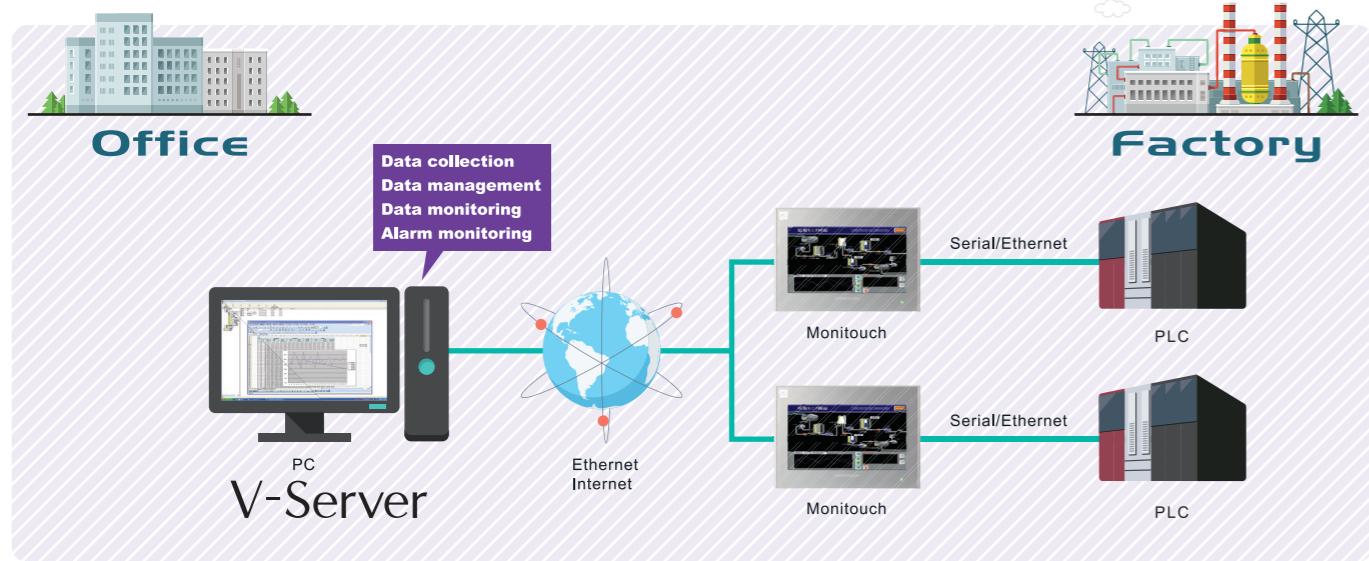

Equivalent functions of Monitouch are available on your PC by directly connecting to PLC after installing TELLUS software on your PC. It is possible to display an image of the entire line on a large screen display and link various Windows applications.

Monitoring the factory from the office enables quick response to changes, improving operating efficiency.

Linking your office and factory for collection of production data

V-Server

Data saving without programming

Data logging function

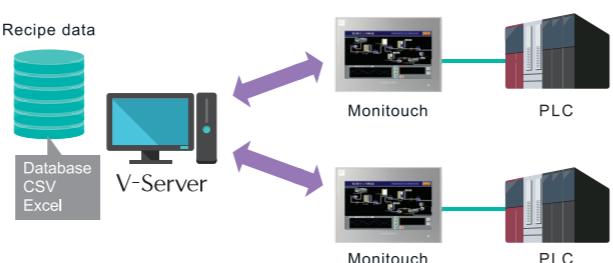

Production data can be regularly read out and saved in database, CSV/ Excel format.

Readout of sampling data

Sampling data stored in Monitouch can be read out and saved in database or CSV/ Excel format.

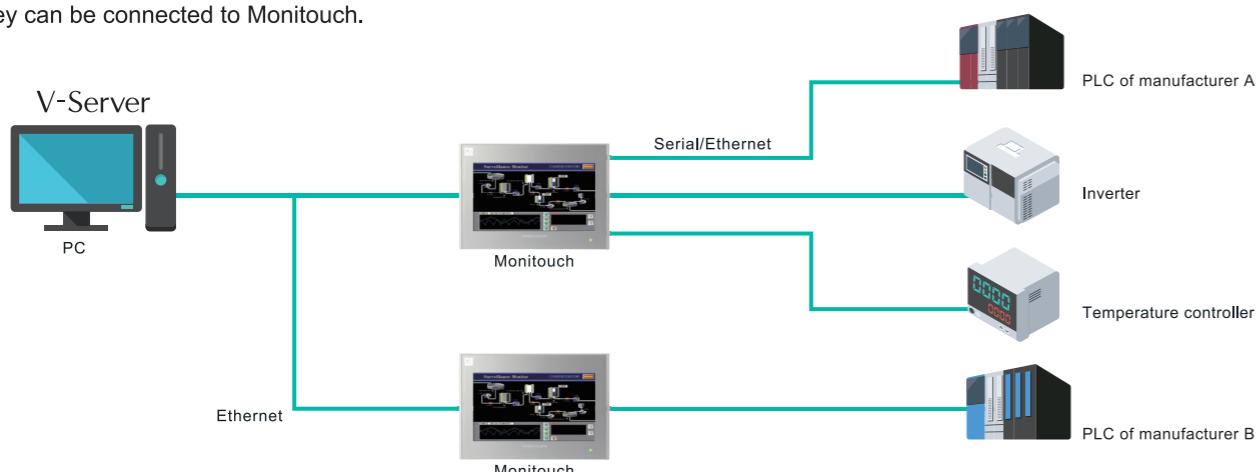

Consolidated recipe data management

Consolidation of recipe data by the upper-level PC reduces the process of recipe registration and modification for each piece of equipment and provides consistent product quality.

Consolidated management of data of PLCs of various types and manufacturers

V-Server collects information from peripheral devices through Monitouch as a gateway. It is possible to collect information from the devices of any type and manufacturer if they can be connected to Monitouch.

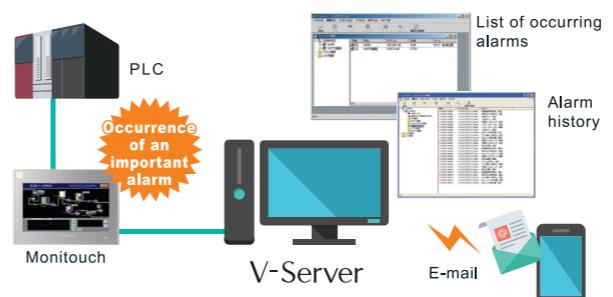

Easy to make daily and monthly reports (DDE function)

The tag data registered in V-Server can be pasted to Excel files in DDE format. This makes it easy to generate daily/monthly reports.

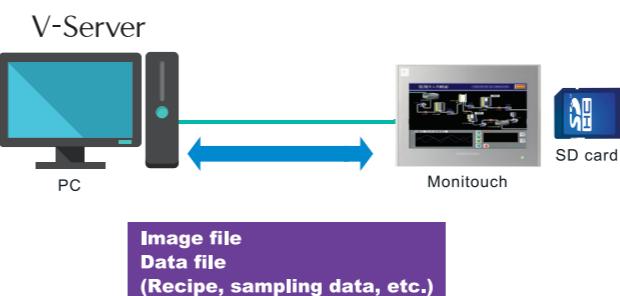

Quick response to on-site problems

Alarm data can be monitored to display historical data or a list of alarms currently occurring. In addition, an e-mail alert can be sent immediately when a critical alarm occurs.

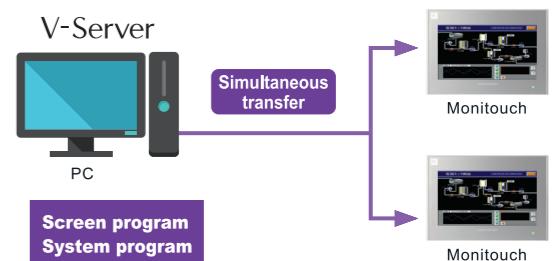

Reading and writing of stored data

Files on a SD card inserted in Monitouch can be read out to a PC, and files edited on a PC can be written onto a SD card via Ethernet.

Updating of Monitouch data from the office

You can update the system program of multiple Monitouch panels at a time or transfer the screen program to them all together.

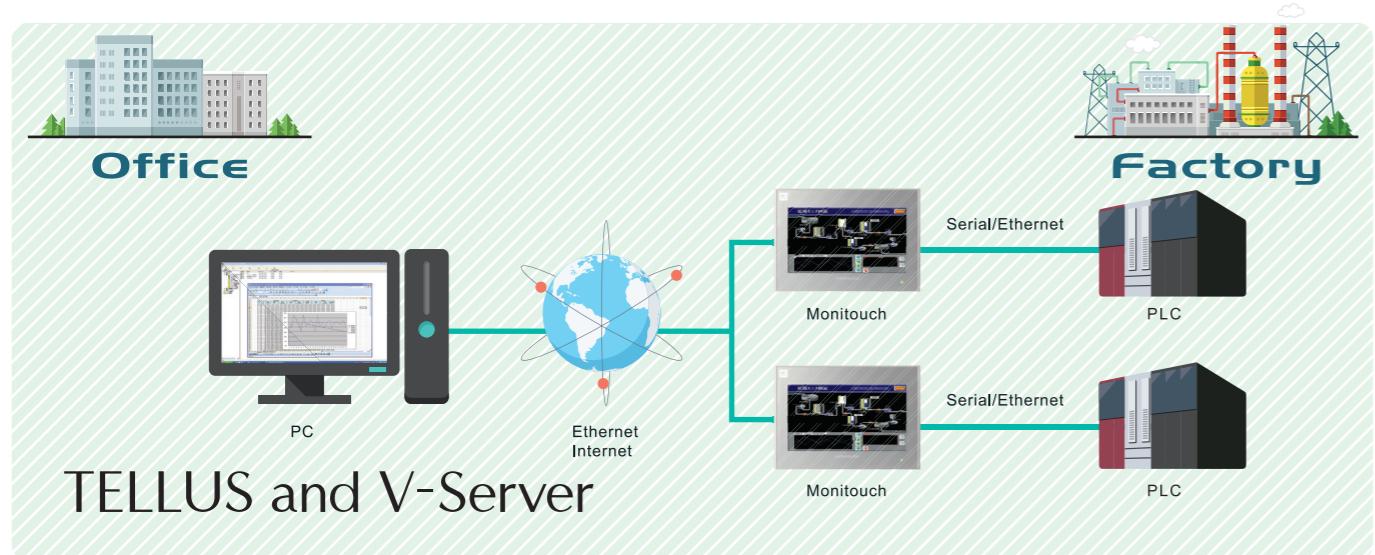

Automatic actions in response to events

Various kinds of events can be set depending on the requirements of the operation. Events allow for a high degree of flexibility, so you can adapt to the specifications of the production line.

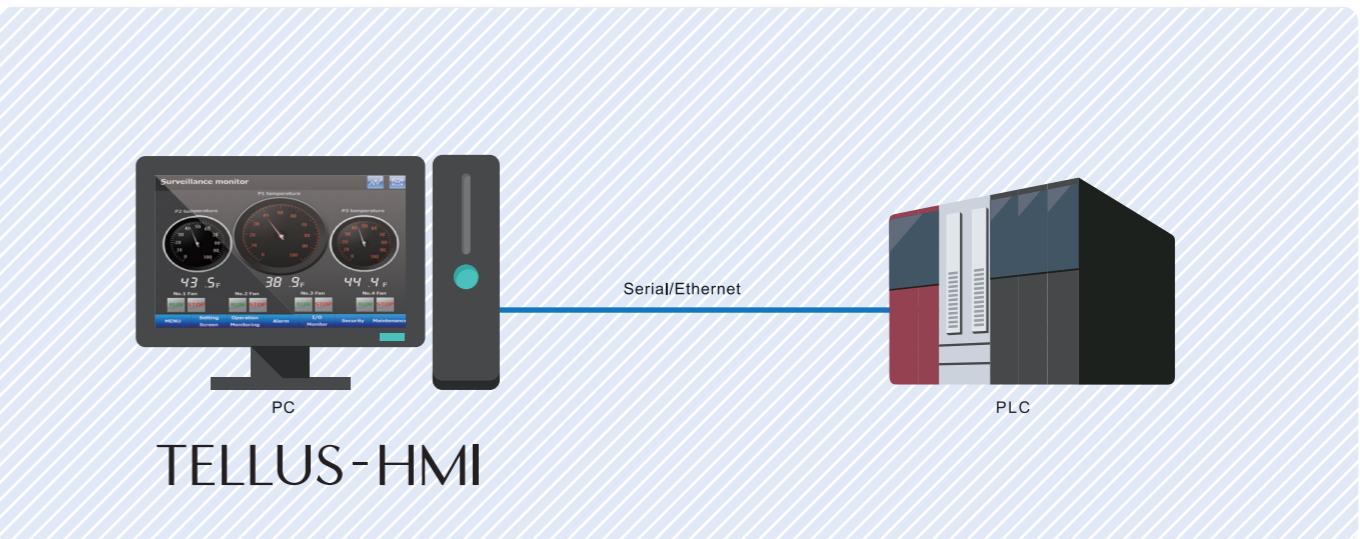

Event (Trigger conditions)		
Bit ON/OFF	Value comparison	Time setting

Action (Operations)		
Start/Stop of logging	Recipe read/write	Sampling readout
Application start-up	Stored data read/write	

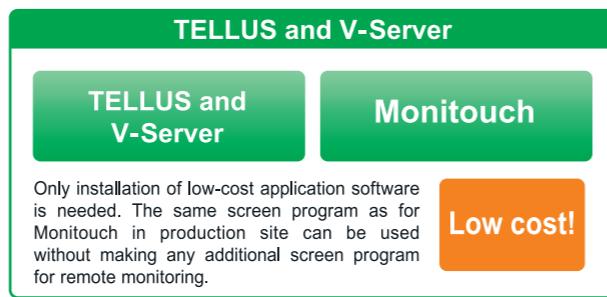

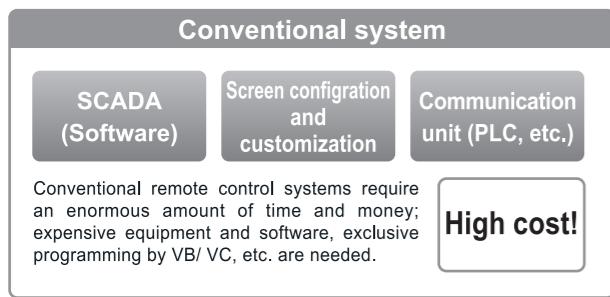

Remote monitoring and control TELLUS-Remote

Integration of PC and Monitouch improves performance beyond Monitouch' s capacity. TELLUS-HMI

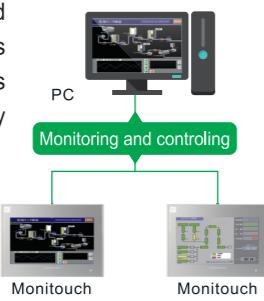

Remote control with excellent cost performance

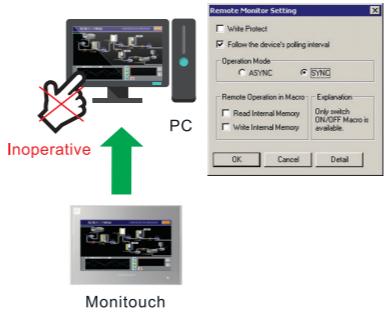

Monitoring and control of multiple units by one PC

TELLUS allows you to control and monitor multiple Monitouch panels with a single PC, which helps improve the operating efficiency and the cost-effectiveness.

Security functions against operation errors

Security functions such as write-protect are provided to ensure safe and secure system operation.

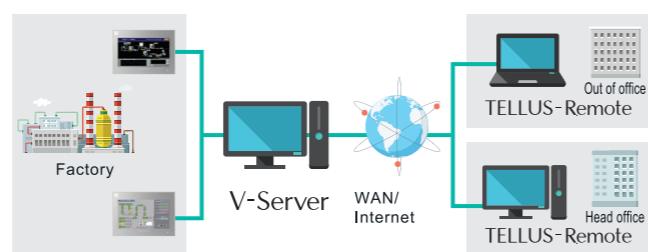

Remote control by means of a simple system

The system is compatible with various systems such as in-house LAN, Internet, WAN, etc.

You can access the on-site screen via the Internet from a remote location.

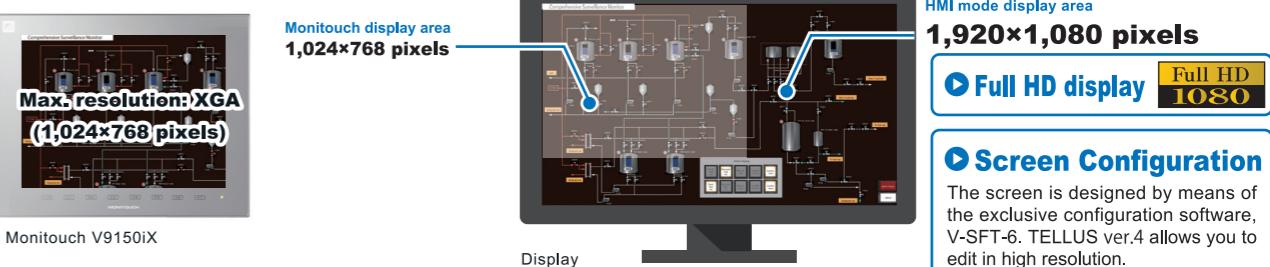

You can monitor overseas plants via WAN.

*It is necessary to modify the setting of firewall and routing for Internet access.

Centralized monitoring of the entire factory with a large screen display

TELLUS HMI supports full HD resolution. The entire image, which cannot be displayed on one Monitouch display, can be displayed on a large screen display.

Screen Configuration
The screen is designed by means of the exclusive configuration software, V-SFT-6. TELLUS ver.4 allows you to edit in high resolution.

Easy selection of peripheral equipment

It is possible to connect peripheral equipment such as printers and mass storage media that have Windows drivers so that the data can be easily output or saved.

Large expandability combined with various applications

Processing of production data such as summary and analysis can be easily conducted using external software.

Shutdown of OS

OS can be shut down on TELLUS without displaying the shutdown menu.

Start-up of application

Various applications can be run, including that for viewing a PDF of the troubleshooting manual.

Loading and execution of DLL functions

DLL functions that were made individually can be loaded and executed on TELLUS.

Advantages of using V-Server “I don’t have to bother collecting data any more.”

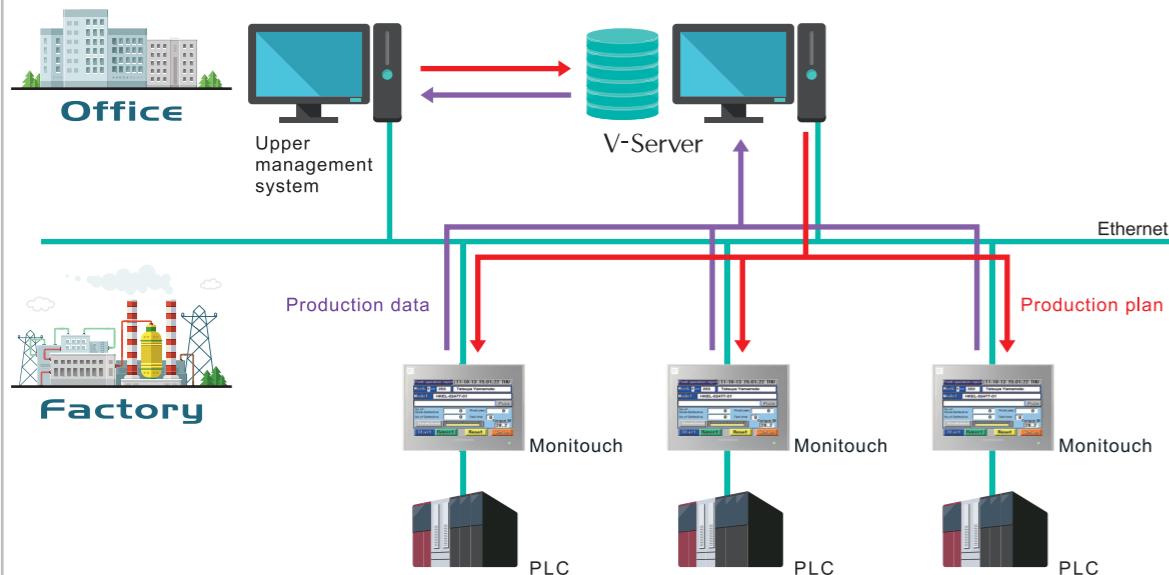

Real-time collection of on-site production data

Production data can be collected in real time without burdening workers.

Collected data can be used for reviewing production plans and improving production facilities.

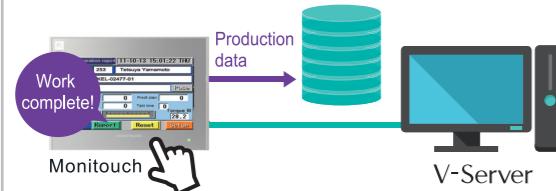

Using collected data to increase production efficiency

Obtaining on-site information in real time makes it possible to draw up appropriate and efficient production plans.

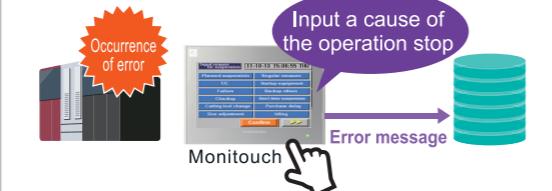

Sending reports upon completion of work

Daily reports are made automatically and accurately to reduce the burden on the production worker and errors.

Producing a database of problems

Data on operation stops and errors are analyzed to improve production facilities.

Advantages of using TELLUS-Remote “We can shorten the downtime.”

Troubleshooting in the office for quick recovery

Prompt response to problems is possible by controlling the production equipment remotely.

Production efficiency is improved by shortening downtime, and there is no need to spend the time and money required to send a person to the production site.

Before

After

The problem can be solved **without spending time and money** required to visit the site.

Significant reduction in time and cost!

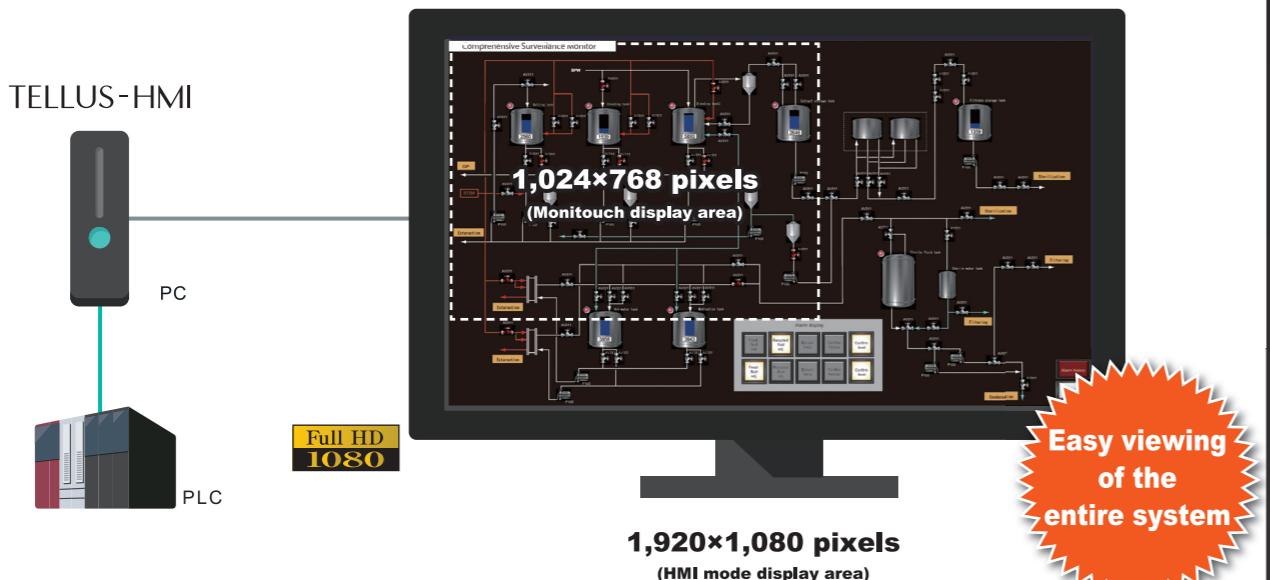

Advantages of using TELLUS-HMI “I won’t miss a problem in production.”

An image of the entire production line can be displayed on one large screen.

Equipping a PC with Monitouch functions makes it possible to have a large, full HD display.

All operation processes can be displayed on one large screen.

Additional displays only for monitoring is available.

Connection of a large display enables easy viewing of the image data.

Run two TELLUS-HMIs and indicate the data on separate displays.

Display 1 (Primary display)

TELLUS-HMI
for the primary display

Display 2 (Monitoring display)

Data can be viewed on two displays!

TELLUS-HMI
for the monitoring display

Operation of the primary display does not interfere with the monitoring display.

Compatible Models & Operation Requirements

● Compatible Models

V9 series

V8iN/ TS2000i series

V8N series + CUN-03-3 (Ethernet unit)

● Recommended Operating Environment

Please ensure the following conditions are in place for the operation of TELLUS and V-Server.

PC	IBM PC/ AT compatible with Windows
OS	Windows XP 32bit, 64bit/ Vista 32bit, 64bit/ Win7 32bit, 64bit/ Win8 32bit, 64bit/ Win8.1 32bit, 64bit/ Win10 32bit, 64bit/ Server 2008 R2/ Server 2012
CPU	Pentium IV 1GHz or more
Memory	256MB or more
Hard disk	1GB or more

● Configuration Software

V-SFT-6

Configuration software for Monitouch V9/ V8/ TS2000/ TS1000 series and TELLUS. You can easily create your own screen program as desired.

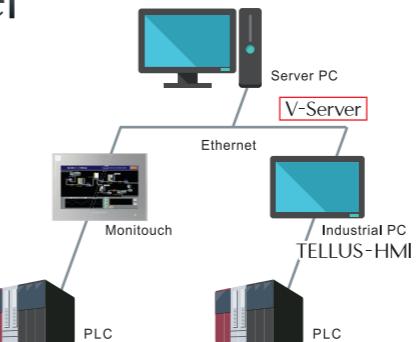

License Types

One license is required for each computer. There are four types of licenses depending on the function. (Licenses are framed in red as below.)

1 V-Server

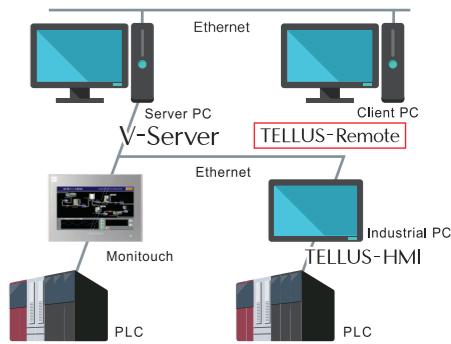

The functions of V-Server are carried out by the server PC.

- Readout/ Writing of the recipe data for Monitouch (or TELLUS HMI)
- Alarm monitoring
- Event action
- Screen data transfer (excluding TELLUS-HMI)

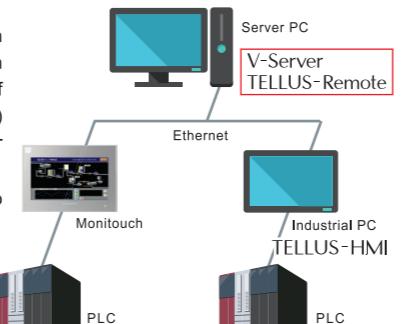

2 TELLUS-Remote

- A client PC equipped with TELLUS accesses V-Server on a server PC via Ethernet and operates the panels of Monitouch (or TELLUS HMI) remotely.
- HMI communication is also possible.

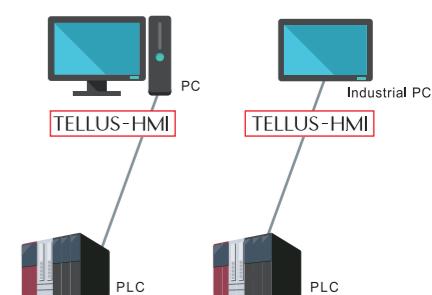

3 TELLUS and V-Server

- A server PC equipped with TELLUS and V-Server can remotely control the panels of Monitouch (or TELLUS HMI) while conducting V-Server functions.
- HMI communication is also possible.

4 TELLUS-HMI

- A PC (or Industrial PC) equipped with TELLUS-HMI and connected with a PLC functions as a Monitouch panel.

License Validation

There are two types of licenses: Password type and USB license type.

USB license key

TELLUS-HMI USB Key

TELLUS-Remote USB Key

TELLUS and V-Server USB Key

Password validation

TELLUS-HMI

TELLUS-Remote

TELLUS and V-Server

V-Server

License Validation

License validation is restricted to one license per computer. There are four types of licenses, one for each function (See above). Check the type of license for the function(s) you wish to use it for.

Notes*: When reinstalling the application software on the same computer, the same password is valid. However, if you initialize the OS or change the computer on which the application software is installed, the password becomes invalid. In this case, you must go through the license validation procedure again to get a new password.*: Excluding the cases of using a USB licence key
